

# This is an utterly isolated bio-environment. What about your farm?

Depopulation is **not** the answer.

Your problem isn't that today's diseases are so strong, but that your supplier's swine are so very weak. If you depop then repop with the same susceptible animals, **what's changed?** Unless you're in the arctic, insects, birds, rodents, trucks, people, and wind-carried diseases will always be with you. **Higher profits come from stronger pigs and Babcock's Closed Herd™ System.**

When you close your herd using our Breedover™ Program, we give you a performance guaranty in writing. Does your supplier? If not, read our *PRRS Conquest Guaranty* and prepare to be amazed.

**Our pigs kick their pigs' butts.**
